

Top burner model PREFIRE

The **PREFIRE** is a high speed burner for application in the kiln roof. Thanks to the flame control devices placed in each firing point, the **PREFIRE** guarantees their auto-ignition at every temperature. The high potential and the automatic control make this type of burner ideal for installation in the preheating zone for the preparation of the material and the eventual elimination of the unburnt gases inside the kiln.

A wide range of accessories complete the range, such as combustion liners in special material according to the type of attack, acid or basic, to which it will be exposed in the kiln. The **PREFIRE** burner is equipped with a dedicated electrical panel for the management that makes it suitable for the installation in existing kilns.

Data Sheet

Type	auto-ignition
Maximum potentiality for each firing points	130.000 Kcal/h
Gas pressure	0,2 / 0,5 bar
Kind of fuel	Methane / natural gas / LPG
Electrical installed power	5 / 7,5 kW
Functioning	Min - Max
Auto-ignition system	Electrodes with pilot flame
Management system	Dedicated electric panel
